

Agile Risk Management

In Agile, risks are identified continuously during sprint planning, demos, retrospectives, and daily stand-ups.

Date:

Project:

IDENTIFY RISKS

Have you identified any new risks?
Which existing risks are you worried about?
How big is the impact and likelihood of the risk?
Who or what could be harmed and how?

CURRENT PREVENTION

What are you already doing to prevent or control risks?

RISK PRIORITY

Which risks should be tackled first?
What are the biggest risks?

FURTHER ACTION

What further action is necessary to control the risks?
Who has the skills to monitor and respond to the risk? Should you assign risk owners?
Set a deadline?

RISK TRIGGERS

What warning signs could alert you that a risk may materialize?
What is the root cause of the risk?
